

Dixie Southern Resumes Normal Operations Following Hurricane Irma

Dixie Southern is pleased to announce that it has resumed all operations and is operating at normal capacity following Hurricane Irma. The company is eager to assist any customers who need fast turnaround times for custom steel fabrication.

According to President and CEO Stan Kinnett, "The eye of the hurricane passed very close to our manufacturing complex in Duette, Florida, resulting in some damage to our smaller buildings. However, we were very fortunate that our main factory sustained very little damage and was up and running within one day after power was restored. As of last Friday, all of our employees had safely returned back to work. Also, there was no major damage at the company's headquarters in Bradenton, Florida."

The storm destroyed many trees on the Duette property, some falling on the smaller buildings, and there was also some water damage to these buildings, including office areas. Employees worked diligently to restore services quickly, and other than issues with some computer systems, the company is back up and running smoothly.

Kinnett expressed his appreciation to the operations and administration teams, led by Pat Logue and Shawntel Carlton, for proper preparation before the storm and the quick actions taken to restore operations once the storm had passed.

Conveniently Located to Serve Many Areas With Fast Turnaround Times

Situated close to both the Tampa International Airport and the Port of Tampa and Port Manatee, Dixie-Southern is uniquely positioned to provide rapid turnaround and excellent quality on its entire range of services.

The company manufactures a diverse line of fabricated steel products including, but not limited to: large-diameter pipe; standard and unique-sized steel and stainless steel tanks and pressure vessels; ductwork for power plants; and large silos and holding containers for food and beverage companies.

Dixie Southern has comprehensive capabilities to cover every aspect of fabrication including welding, drilling, sawing, rolling, punching, painting and shearing.
